In order to really learn physics well, it is important to share your physics ideas and practice using them in front of the instructional team and your classmates.

1. Introduce yourselves to your group and write your names and pronouns (optional) on your whiteboard.

2. List ways you classmates can:

   - Support your learning
   - Help you feel comfortable sharing your ideas in a small group
   - Help you share your ideas with the whole class

   What can "being respectful" look like in this class?

3. In another column on your whiteboard list ways the instructional team can support your learning
